

## NK Fertiliser Solution

**15% nitrogen (N) (13.5% ureic, 1.5% nitric), 7% potassium oxide ( $K_2O$ ) w/w**

**NHK Delta** is a high performance soil and or foliar feed combining stabilised nitrogen with potassium to give strong root development and to improve quality, yield and tolerance. The product will also improve crop performance where salinity is a problem along the fruit expansion period. NHK Delta is especially indicated for additional potassium applications at the end of the crop cycle.

**Recommendations** Top fruit trees, potato, cereals, OSR, all vegetables, all fruit, tomato, all greenhouse crops and most other crops.

**Tank-mixing** Compatible with most pesticides and foliar fertilizers. Avoid mixing with sulphur containing or high phosphate fertilisers as precipitation may occur. Always jar-test before use to ensure physical compatibility.

**Storage conditions** Keep at an ambient temperature between 4°C and 45°C. Avoid freezing and excessive heat. At cooler temperatures crystallisation may occur, this can be resolved by mixing with water or increasing the temperature.

**Shake well before use**

**Pack Size**  
**1000L**

Crop Nutrition • Sustainable Farming • Biological Delivery

Crop	Application	Growth Stage
Protected crops	Irrigation or foliar	From planting date
Vegetables	Irrigation or foliar	From planting date
Top fruit and vineyards	Irrigation or foliar	From bud break
Stawberries	Irrigation or foliar	From 3rd leaf
Potato	Irrigation or foliar	From planting date
OSR	Foliar	After drilling to end of pod set
Soft Fruit	Irrigation or foliar	From planting date
Cereals	Foliar	From planting date
Brassica	Irrigation or foliar	From planting date

### **Soil application rate**

Up to 300L/ha/season split into applications of 10-30L. Minimum 1-10 dilution in water suitable for application through drip irrigation.

### **Foliar application rate**

5-10 L/ha or 1% spray solution and spray until run-off. Avoid spraying during direct sunlight.
