

Mixture of trace elements

0.5% copper (Cu), 1.5% iron (Fe), 1% manganese (Mn), 2% zinc (Zn) w/w

XStress is a fertiliser developed to reduce the negative effects that result from environmentally stressful situations.

Containing a mixture of micronutrients, formulated with glycine for optimal foliar uptake, **XStress** allows crop growth in extreme conditions such as high or low temperatures, water stress, high light conditions and high concentrations of salt in soil or water, when plant uptake of nutrients is severely restricted.

Recommendations: Suitable for use in all arable and horticultural crops growing under difficult environmental conditions. Improvement in plant health and increased post harvest shelf life of fruit and vegetables. For specific crop recommendations visit www.bionatureagriculture.com.
